Creativity Inclusion Resilience Sobriety

Themes: [Health](#)

The objectives of the training

- Acquire benchmarks on the actors and systems of public health policies
- Understand the main issues intersecting health and urban renewal: environmental health, healthcare provision, inequalities and vulnerabilities
- Understanding the concepts of “determinants of health” in an urban environment
- Know how to organize the collection and analysis of relevant data
- Learn to program and design health-promoting operations
- Know the different stages of a Health Impact Assessment
- Working collectively around the main phases of a Health-Friendly Urban Planning (UFS) approach
- Better integration of health issues into development projects
- Know how to anticipate the impact of the implementation of the project on well-being and health and have tools to evaluate it
